

Buffalo State Physics Department Presents:

Dr. AC Williams
UB Physics Graduate & BSU Alum

“My Evolution into a Physicist: Just a 16-Year Side Quest”

Thursday, April 10th in Upton 230
12:30-1:30pm (*Bengal Pause*)

BUFFALO STATE
The State University of New York

I have lived in Buffalo, NY, for my entire life and became enthralled by science and anything related to outer space very early on. My career as a physicist is only just beginning, but I want to share how I got here. The first portion of this talk will focus on my academic journey—from my introduction to physics in high school to defending my dissertation on searching for beyond Standard Model (BSM) physics earlier this year—while also sharing some of my personal life experiences and challenges throughout the process. In the final portion, I will discuss some of the research conducted with the aid of my research group and explain how my interests and skill set guided me toward this research topic.
